

## ABSTRACT OF THE DISCLOSURE

~~The present invention relates to a~~ A mobile communication system ~~comprising:~~  
includes at least one subscriber database containing subscriber data, and exchanges  
connected to each other by communication paths,~~at.~~ At least one of the exchanges  
~~comprising~~ includes means for transmitting a request to the subscriber database,~~said.~~  
The request including includes at least a B-subscriber number to a terminating call. To  
provide a system ~~which~~ that is capable of selecting the optimum communication path for  
a terminating call ~~said,~~ the subscriber database ~~comprises~~ includes means for retrieving  
and transmitting to ~~said~~ an exchange, a basic service code that corresponds to the B-  
subscriber number included in the request,~~and said.~~ The exchange ~~comprises~~ includes  
means for routing ~~said~~ the terminating call to the B-subscriber number by using  
communication paths that fulfill the property requirements of the call type indicated by  
~~said~~ the basic service code.
